MPU™ 200c

Bulletin SSKS006 Issue/Rev. 0.1 (8/17)

Single Path Gas Ultrasonic Flowmeter

The **MPU™ 200c Ultrasonic Gas Flowmeter** is the latest generation single path ultrasonic flow meter from TechnipFMC that excels as a backup or non-custody transfer check meter where reliability and accuracy in a simplified design are required. The MPU 200c comes with non-intrusive and flush mounted transducers providing undisturbed gas flow measurement ideal for multiple applications.

Principle of Operation

The MPU 200c calculates flow rate by measuring the acoustic transit time of ultrasonic signals traveling back and forth across the flow. The signal transmission and detection is achieved using two piezoelectric transducers located on each side of the measurement path.

The high speed electronics measure the transit time in both the upstream and downstream direction. This information is used to accurately calculate the flowing velocity and volumetric flow rate of gas through the meter.

Features

- **Optimum Path Placement –** The unique I position of the single measurement path above the center line of the pipe minimizes the effects of changing flow profile with Reynolds number and maximize accuracy and measurement range.
- **Wet Gas and Contaminants –** The path placement on the MPU 200c also makes it ideal for applications containing wet gas or other types of contaminants in the gas. The path is straight to avoid any difficulties often experienced with reflective designs in “dirty” applications. The location is better suited to avoiding liquids or solids passing through the bottom of the pipe.
- **Advanced Electronics –** The new MPU 200c includes the cutting edge speed, accuracy and diagnostic capabilities of the Series C electronics.
- **Noise Immunity –** The digital signal filtering and processing increases noise immunity allowing for accurate measurement in difficult, high noise installations.
- **On Board Memory for Diagnostic Analysis –** On board memory stores 28 days of continuous process data making a detailed diagnostic analysis of process conditions and meter operation possible following any process upset or alarm condition.
- **Integrated or Remote Color Touch Screen Display –** The optional color touch screen display can be attached as the front panel of the meter electronics or remotely mounted using the optional wall mounted display. The color touch screen display assembly is explosion-proof and communicates via Ethernet with the meter electronics.
- **Web-based Interface –** Meter can directly interface with a web browser to serve as the operator interface display, eliminating the need for specialized software interfacing and improving accessibility and ease of use.
- **In-line Transducer Replacement –** The transducers can easily and safely be removed under pressure using a transducer retraction tool with isolation valves eliminating the need for process shut down or recalibration due to servicing.

Operating Specifications								
Size	Velocity, m/sec		Velocity, ft/sec		Flow Rate, Am3/h(1)		Flow Rate, AMCFD(1)	
	Min	Max	Min	Max	Min	Max	Min	Max
4"	0.40	30.0	1.31	98.4	11.8	887	10.0	752
6"	0.40	30.0	1.31	98.4	26.8	2,013	22.7	1,706
8"	0.40	30.0	1.31	98.4	46.5	3,486	39.4	2,954
10"	0.40	30.0	1.31	98.4	73.3	5,494	62.1	4,657
12"	0.40	30.0	1.31	98.4	105	7,880	89.1	6,679

Flow rates calculated for schedule STD pipe, other schedules will vary. Consult factory for additional pipe sizes and schedules. Consult factory for flow velocities outside of the normal minimum and maximum values.

Operating Pressure Range
1-275 bar_a / 15 to 3,990 psi_a
Please consult factory for pressures up to 350 bar.

Maximum Working Pressure - PSI (bar)		
ASME	Carbon Steel	Stainless Steel
150	285 (20)	275 (19)
300	740 (51)	720 (50)
600	1,480 (102)	1,440 (99)
900	2,220 (153)	2,160 (149)
1500	3,990 (275)	3,990 (275)

Nominal Accuracy
+/- 1.5% - 2.5% depending upon the application.

Temperature	
Operating flow temperature:	-20°C to 70°C / -4°F to 158°F
Operating ambient temperature:	-25°C to 60°C / -13°F to 140°F
Storage Temperature:	-40°C to 60°C / -40°F to 140°F

Standard Flange Connections
Typically ANSI B16.5 RF or RTJ face flanges. Other types flange connections available on request.

NACE Compliant
Designed for NACE MR0175 compliance.

Meter Body and Flanges Material
Carbon Steel: A350 LF2 Stainless Steel: A182 F316
For other options consult factory.

Transducer
Piezoelectric element, fully encapsulated in a titanium housing – special solution for H_2S and C_6+ applications.

1 Flow rates correspond to conditions of actual temperature and pressure (AVF). For ranges in units of standard volumetric flow (SVF) use the following:

$$SVF = AVF\left(\frac{P_{actual}}{P_{standard}}\right)\left(\frac{T_{standard}}{T_{actual}}\right)$$

Instrument Power

DC Instrument Input Power to Field Mounted Electronics

24 VDC, +20% / -15%, 0.5A without integrated display
0.7A with integrated display
Power inrush: 10 Amps for < 20mS at 24 VDC. The DC power input circuitry is reverse current protected and fused.
Tested to 20 milliseconds power dropout, 100 milliseconds power brownout without shut down. Meter will always restart orderly after power loss.

Electrical Inputs

Digital Inputs

Quantity: 2
Function: Input 1 – Consult Factory.
Input 2 – Dedicated to external Weights & Measures switch input
Type: Optically isolated, internally current limited digital input
Input voltage range (V-high): 5 to 28 VDC
Maximum input frequency: 10KHz
V (high): 5.5 VDC minimum to 28 VDC maximum.*
V (low): 1 VDC maximum.*
Current at maximum voltage: 20mA maximum
Input impedance: 1.67 kΩ.

***Note:** The input pulse must rise above V (high-minimum) for a period of time then fall below V (low) to be recognized as a pulse.

Analog Input (4-20mA)

Quantity: 2
Type: Two-wire, 4-20mA current loop receiver, common neutral isolated from system ground, programmable as to function
Span adjustment: 3.8mA to 22mA span, User-programmable inside these limits.
Input burden: 50Ω
Resolution: 24-bit
Voltage drop: 2 Volts maximum
Recommended cable: Belden 8729, 9940 or equivalent

Analog Input (Temperature Probe – RTD)

Quantity: 1
Type: Four-wire, 100Ω Platinum Resistance Temperature Detector (PRTD)
Temperature coefficient: @ 0°C: 0.00385Ω/Ω/°C
Temperature range: -60°C to 180°C
Offset: Temperature probe offset is user-programmable
Self calibrating: Lead length compensation that requires no resistance balancing of leads

Electrical Outputs Communications

Ethernet

IEEE 802.3 Ethernet operating at 10/100 Mbps
Modbus TCP/IP at port 502

10/100Base-TX (Ethernet over twisted pair)

Maximum of 2 ports (1 if fiber optic option is enabled via jumpers. 0 if integrated display is fitted and fiber optic is enabled)
Auto-MDIX – Will work with straight or crossover cable automatically
RJ-45 connector per port
Maximum distance between Ethernet devices: 100m (328ft)
Recommended cable: Category 5 or better

100Base-FX (Ethernet over fiber optic)

1300nm wavelength MT-RJ connector
Maximum Distance between Ethernet devices: 2km (6,561ft)*
Recommended cable: 1-pair 62.5/125 µm multimode glass
Transmitter output minimum optical power: -20dBv avg
Receiver input minimum optical power: -31dBm avg
Optical Power Budget (OPB) at 0.5km with recommended cable: 9dB
Optical Power Budget (OPB) at 2km with recommended cable: 6dB

***Note:** Optical losses in cables, connectors, and couplers can reduce this maximum limit.

Serial

EIA-485 Port: 2 wire
120Ω endpoint termination resister included in circuit, user selectable via jumper
Configuration: Multi-drop network
Line Protocol: Half duplex
Data Rate: Selectable asynchronous data (Baud) rates of 1200, 2400, 4800, 9600,19200, 38400, 57600 or 115200 bps
Word Length: 7 or 8 bits
Parity: None, odd, or even
Protocol: MODBUS (RTU) or Modbus ASCII
Recommended cable: Belden 3106A, 9841, or equivalent low capacitance cable

HART

The optional HART interface operates over the 4-20 mA analog output and supports the following commands.

All Universal Commands:

- Read up to four dynamic variables
- Read and write TAG name
- Read range values and sensor limits
- Read and write user messages and date

Common Practice Commands required for:

- Selection of engineering units
- Burst mode control

Digital/Pulse Outputs

Quantity: 2
Volume output with programmable K-factor.
Configuration Selections:

1). Quadrature (I, Q)
2). Pulse (forward, reverse)
3). Pulse (pulse, direction)
4). Pulse (Pulse, direction inverted)

Type: Current limited active output or open collector – jumper selectable
Switch blocking voltage (switch off): 30 VDC maximum
Frequency Range: 0 to 10kHz nominal, overrange up to 15kHz
Minimum Pulse Width: > 66µs (50% duty cycle nominal)
24 VDC Input Power Supply: No Load: 23 ±0.3 Vp-p square wave
270Ω Load: 12 ±0.3 Vp-p square wave (minimum)
12 VDC external power supply for pulse output circuitry: No Load: 11 ±0.3 Vp-p square wave
270Ω Load: 6 ±0.3 Vp-p square wave (minimum)
Current: Maximum Sink Current: 300mA @ 29 VDC
Maximum Source Current: 80mA @ 29 VDC

Recommended cable: Belden 9402. Up to 2000 ft use 20AWG, up to 3000 ft use 18AWG. Shielded cable is recommended with the shield connected only at the receiving instrument. If using dual (quadrature) pulse output the two conductors carrying the outputs must not be in the same pair and ideally individually shielded.

Analog Output (4-20mA)

Quantity: 1
Type: Two-wire, loop powered, isolated from ground, user programmable as to function
Span adjustment: 3.8mA to 21mA User adjustable
Alarm output: 22.5mA
Resolution: 16-bit
Compliance voltage range: 6 VDC to 28 VDC
Maximum load resistance @ 10 VDC: 250
Recommended cable: Belden 8729, 9940 or equivalent

Alarm Output

Quantity: 1
Type: Optically-isolated solid state output
Polarity: Open during alarm and power off
Switch blocking voltage: 30 VDC maximum
Load current: 125mA maximum with 0.6 volt drop

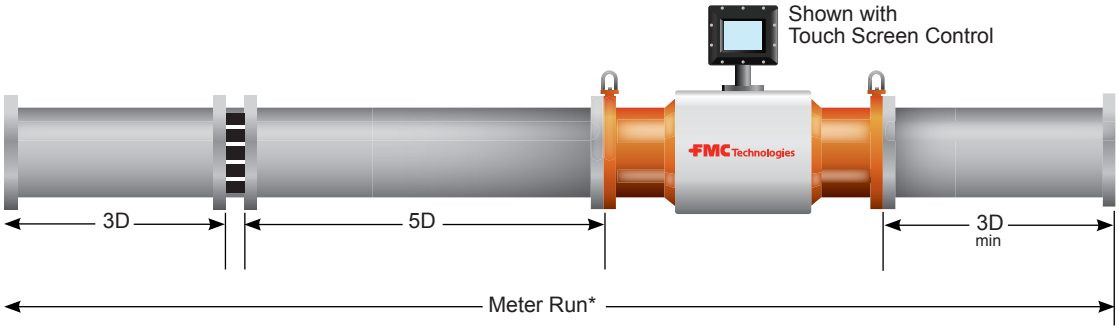
Recommended Installation

The recommended installation for the MPU 200c is 3D, then the flow conditioner, then 5D upstream straight pipe before the meter. Downstream of the meter is 3D. For bi-directional measurement the same 3D+FC+5D is on both sides of the meter. The meter run must be the same pipe diameter as the meter inlet and concentrically centered so that neither the pipe edge nor gasket protrude into the fluid flow. For correct centering it is recommended to use the centering dowel pin provided on the meter flange.



* Diagram not drawn to scale.

Catalog Code

The following guide defines the correct ultrasonic flowmeter for a given application and the respective catalog code. This code is part of the ordering information and should be included on the purchase order.

Standard Configuration

Instrument Power: 24 VDC
2 Analog Inputs: 4-20mA
1 Analog Input: 4-wire RTD
1 Analog Output: 4-20mA
1 Digital Output: Dedicated to alarm – Optically isolated solid-state output
2 Digital Inputs: 1 dedicated to Weights & Measures switch
2 Pulse Outputs: Solid-state output (0 - 10 kHz) user-programmable K-factor, Quadrature
2 Ethernet: 2 Twisted pair (10Base-T/100Base-T)
1 Serial: 2 Wire EIA-485
