

OPTIMASS 1400

Sensor for mass flow

- First choice for universal applications
- Best price-performance ratio
- A wide range of options available with no restrictions

The documentation is only complete when used in combination with the relevant documentation for the signal converter.

1.1 Overview

The OPTIMASS 1400 is the cost effective solution for accurate measurement for a variety of applications. The OPTIMASS 1400 reliably measures mass, density, volume, temperature, volume concentration or solid content.

- ① Modular electronics with a range of output options (see separate documentation for details).
- ② The power of the MFC 400 gives comprehensive diagnostics together with Entrained Gas Management (EGM).
- ③ Available with a range of flange and hygienic connections.

- ① Remote terminal box

Highlights

- Innovative twin measuring tubes
- Easily drained and easy to clean
- Resistant to installation and process effects
- Long working life.
- Optimised flow divider for minimum pressure loss.
- High levels of accuracy means an excellent price / performance ratio.
- Modular electronics with data redundancy - "plug & play" replacement of electronics

Industries

- Water & wastewater
- Chemical
- Food & beverage
- Paper & pulp
- Petrochemical industry
- Pharmaceutical industry

Applications

- Suitable for all standard applications up to 130°C
- Hygienic connections make it ideal for food / beverage applications.

1.2 Features and options

Features

- Available as compact or remote.
- Low pressure loss, guarantees a low pressure drop across the meter.
- Self Draining.
- Easy to clean.

Connection options

- A range of flanges up to ASME 600 / PN100.
- Supports a wide range of industry standard hygienic connections.
- Adaptable to suit customer's hygienic connections.

Heating jacket & purge port

- Heating jacket option for use with temperature dependant products.
- Prevents solidification of process product.
- Purge port option for protection in the event of measuring tube failure.
- Allows hazardous chemicals to be drained away safely.
- Can also be used for the early detection of measuring tube failure where highly toxic chemicals are being measured.

1.3 Meter / converter combinations

Converter	MFC 400	
Configuration	Compact	Remote field
OPTIMASS 1400	1400C	1400F

2.1 Measuring principle (twin tube)

Static meter not energised and with no flow

- ① Measuring tubes
- ② Drive coil
- ③ Sensor 1
- ④ Sensor 2

A Coriolis twin tube mass flowmeter consists of two measuring tubes ① a drive coil ② and two sensors (③ and ④) that are positioned either side of the drive coil.

Energised meter

- ① Measuring tubes
- ② Direction of oscillation
- ③ Sine wave

When the meter is energised, the drive coil vibrates the measuring tubes causing them to oscillate and produce a sine wave ③ . The sine wave is monitored by the two sensors.

Energised meter with process flow

- ① Process flow
- ② Sine wave
- ③ Phase shift

When a fluid or gas passes through the tubes, the Coriolis effect causes a phase shift in the sine wave that is detected by the two sensors. This phase shift is directly proportional to the mass flow.

Density measurement is made by evaluation of the frequency of vibration and temperature measurement is made using a Pt500 sensor.

2.2 Technical data

- The following data is provided for general applications. If you require data that is more relevant to your specific application, please contact us or your local sales office.
- Additional information (certificates, special tools, software,...) and complete product documentation can be downloaded free of charge from the website (Downloadcenter).

Measuring system

Measuring principle	Coriolis mass flow
Application range	Mass flow and density measurement of fluids, gases and solids
Measured values	Mass, density, temperature
Calculated values	Volume, referred density, concentration, velocity
Sensor model range	
Stainless Steel UNS S31803 15...50	Compact / remote 100 barg @ 20°C / 1450 psig @ 68°F, temp. range -40°C...+130°C / -40°F...+266°F

Design

Basic	System consists of a measuring sensor and a converter to process the output signal
Features	Fully welded maintenance free sensor with twin straight measuring tubes
Variants	
Compact version	Integral converter
Remote version	Available with a field version of the converter

Performance specification

Reference conditions	
Calibration fluid	Water
Calibration temperature	+20°C / +68°F (± 5°C)
Calibration pressure	1...6 barg / 14.5...87 psig
Calibration rig	Accreditation satisfies the requirements of BS EN ISO / IEC 17025
Mass flow	
Liquid	
Maximum permissible error	±0.15% of actual measured flow rate ±zero stability
Repeatability	Better than 0.075% of actual measured flow rate ±zero stability
Gas	
Maximum permissible error	±0.5% of actual measured flow rate ±zero stability
Repeatability	Better than 0.2% of actual measured flow rate ±zero stability
Zero stability	
Meter size	
15	0.65 kg/h / 0.024 lb/min
25	2.70 kg/h / 0.099 lb/min
40	8.00 kg/h / 0.294 lb/min
50	17.00 kg/h / 0.625 lb/min

Maximum permissible error on sensor zero point caused by a deviation in process temperature from zero calibration temperature	
All meter sizes	$\pm 0.0075\%$ of nominal flow per 1°C / $\pm 0.0042\%$ of nominal flow per 1°F
Maximum permissible error on sensor zero point caused by a deviation in process pressure from zero calibration pressure	
All meter sizes	$\pm 0.015\%$ of nominal flow per 1 bar / $+0.001\%$ of nominal flow per 1 psi
Density	
Measuring range	400...2500 kg/m^3 / 25...156 lb/ft^3
Maximum permissible measurement error	
S15	$\pm 5 \text{ kg/m}^3$ / $\pm 0.31 \text{ lb/ft}^3$
S25...50	$\pm 2 \text{ kg/m}^3$ / $\pm 0.13 \text{ lb/ft}^3$
Repeatability / on site calibration	
S15	Better than $\pm 2 \text{ kg/m}^3$ / $\pm 0.13 \text{ lb/ft}^3$
S25...50	Better than $\pm 0.5 \text{ kg/m}^3$ / $\pm 0.031 \text{ lb/ft}^3$
Maximum permissible error on density of deviation from calibration temperature	
S15	$\pm 0.25 \text{ g/l}$ per 1°C / $\pm 0.0156 \text{ lb/ft}^3$ per 1°F
S25...50	$\pm 0.15 \text{ g/l}$ per 1°C / $\pm 0.0094 \text{ lb/ft}^3$ per 1°F
Volume flow	
Measurement error and repeatability calculations satisfy the requirements of BS ISO 10790 (most recent and up to date version)	
Temperature	
Maximum permissible error	$\pm 1^{\circ}\text{C}$ / $\pm 1.8^{\circ}\text{F}$ of reading

Operating conditions

Nominal flow rates (1 barg / 14.5 psig pressure drop)	
Meter size	
15	4800 kg/h / 176.4 lb/min
25	20000 kg/h / 734.9 lb/min
40	60000 kg/h / 2204.6 lb/min
50	125000 kg/h / 4593 lb/min
Maximum flow rates	
All meters	130% of nominal flow rate

Environmental

Ambient temperature	
Compact version with Aluminium converter	$-40\ldots+60^{\circ}\text{C}$ / $-40\ldots+140^{\circ}\text{F}$
	Extended temperature range: $+65^{\circ}\text{C}$ / $+149^{\circ}\text{F}$ for some I/O options. For more information contact manufacturer.
Compact version with Stainless Steel converter	$-40\ldots+55^{\circ}\text{C}$ / $-40\ldots+130^{\circ}\text{F}$
Remote versions	$-40\ldots+65^{\circ}\text{C}$ / $-40\ldots+149^{\circ}\text{F}$
Process temperatures	
Flanged connection	$-40\ldots+130^{\circ}\text{C}$ / $-40\ldots+266^{\circ}\text{F}$
Hygienic connection	$-40\ldots+130^{\circ}\text{C}$ / $-40\ldots+266^{\circ}\text{F}$
Hazardous Area versions	Refer to temperature limits

Protection category	IP 66 / 67 (EN 60529), NEMA 4X
Vibration (acc IEC 60068-2-6)	10-150-10 Hz with 0.15 mm for 10...60 Hz, 20 m/s ² for 60...150 Hz
Nominal pressure at 20°C / 68°F	
Measuring tube	
cFMus / PED	-1...100 barg / -14.5...1450 psig
CRN / ASME B31.3	-1...100 barg / -14.5...1450 psig
If the process temperature is higher than 20°C / 68°F, the burst pressure will be lower. For more information please contact the manufacturer.	
Fluid properties	
Permissible physical condition	Liquids, gases, slurries
Permissible gas content (volume)	Contact manufacturer for information.
Permissible solid content (volume)	Contact manufacturer for information.
Installation conditions	
Inlet / outlet runs	None required

Materials

Measuring tubes	Stainless Steel UNS S31803 (1.4462)
Spigots	Stainless Steel 316 / 316L (CF3M / 1.4409) dual certified
Flanges	Stainless Steel 316 / 316L (1.4401 / 1.4404) dual certified
Outer cylinder	Stainless Steel 304 / 304L (1.4301 / 1.4307) dual certified
	Optional Stainless Steel 316 / 316L (1.4401 / 1.4404) dual certified
Heating jacket version	
Heating jacket	Stainless Steel 316L (1.4404)
	The outer cylinder is in contact with the heating medium
All versions	
Junction box (remote version)	Die cast Aluminium (polyurethane coating)
	Optional Stainless Steel 316 (1.4401)

Process connections

Flange	
DIN	DN15...100 / PN40...100

2.3 Hazardous areas temperature limits

OPTIMASS 1000F

Ambient temp. T_{amb} °C	Max. process temp. T_m °C	Temp. class	Max. surface temp. °C
-40...+60	60	T6 - T1	T80
-40...+65	75	T5 - T1	T95
	110	T4 - T1	T130
	130	T3 - T1	T185
Minimum process temperature: $T_{amb} \geq -35^{\circ}\text{C}$ $T_m = -50^{\circ}\text{C}$, $T_{amb} < -35^{\circ}\text{C}$ $T_m = -40^{\circ}\text{C}$			

OPTIMASS 1400C with aluminium converter housing

Ambient temp. T_{amb} °C	Max. process temp. T_m °C	Temp. class	Max. surface temp. °C
-40...+40	45	T6 - T1	T80
-40...+50	60	T5 - T1	T95
	95	T4 - T1	T130
	130	T3 - T1	T165
-40...+65	65	T4 - T1	T100
Minimum process temperature: $T_{amb} \geq -35^{\circ}\text{C}$ $T_m = -50^{\circ}\text{C}$, $T_{amb} < -35^{\circ}\text{C}$ $T_m = -40^{\circ}\text{C}$			

OPTIMASS 1400C with Stainless Steel converter housing

Ambient temp. T_{amb} °C	Max process temp. T_m °C	Temp. class	Max. surface temp. °C
-40...+40	45	T6 - T1	T80
	130	T3 - T1	T165
-40...+50	95	T4 - T1	T130
-40...+60	60	T5 - T1	T95
Minimum process temperature: $T_{amb} \geq -35^{\circ}\text{C}$ $T_m = -50^{\circ}\text{C}$, $T_{amb} < -35^{\circ}\text{C}$ $T_m = -40^{\circ}\text{C}$			

2.4 Guidelines for maximum operating pressure

Notes:

- Ensure that the meter is used within its operating limits
- The maximum operating pressure will be either the flange rating or the measuring tube rating, **WHICHEVER IS THE LOWER!**
- The manufacturer recommends that the seals are replaced at regular intervals. This will maintain the hygienic integrity of the connection.

Pressure / temperature de-rating, all meter sizes, in metric (flanged connections as per EN 1092-1)

X temperature [°C]

Y pressure [barg]

- ① Measuring tubes and 100barg 316L secondary containment (PED)
 ② 63 barg 304L / 316 secondary containment (PED)

Pressure / temperature de-rating, all meter sizes, in imperial (flanged connections as per ASME B16.5)

X temperature [°F]

Y pressure [psig]

- ① Measuring tubes S15 / S25 (CRN)
- ② Measuring tubes S40 (CRN)
- ③ Measuring tubes S50 (CRN)
- ④ Secondary containment 304L / 316L (CRN)

Flanges

- DIN flange ratings are based on EN 1092-1 2001 table 18 (1% proof stress) material group 14E0
- ASME flange ratings are based on ASME B16.5 2003 table 2 material group 2.2
- JIS flange ratings are based on JIS 2220: 2001 table 1 division 1 material group 022a

Pressure / temperature de-rating (metric) for meters with hygienic connections.

X temperature [°C]

Y pressure [barg]

- ① SMS 1...1½", DIN 11851 DN10...40
- ② SMS 2", Tri-clamp DN10...40, DIN 11864-2 DN10...40, DIN 11851 DN50...65
- ③ SMS 3", Tri-clamp DN50...65, DIN11864-2, DIN11864-2 DN50...100, DN11851 DN80...100
- ④ SMS 4", Tri-clamp DN80...100

Pressure / temperature de-rating (imperial) for meters with hygienic connections.

X temperature [°F]

Y pressure [psig]

- ① SMS 1...1½", DIN 11851 DN10...40
- ② SMS 2", Tri-clamp DN10...40, DIN 11864-2 DN10...40, DIN 11851 DN50...65
- ③ SMS 3", Tri-clamp DN50...65, DIN11864-2, DIN11864-2 DN50...100, DN11851 DN80...100
- ④ SMS 4", Tri-clamp DN80...100

2.5.4 Heating jacket version

	Dimensions [mm]			
	S15	S25	S40	S50
Heating connection size	12 mm (ERMETO)			25
A	115 ±1	142 ±1	206 ±1	254 ±1
B	51	55	90	100
C	20			25

	Dimensions [inches]			
	S15	S25	S40	S50
Heating connection size	½" (NPTF)			1.0
A	4.5 ±0.04	5.6 ±0.04	8.1 ±0.04	10.0 ±0.04
B	2.0	2.2	3.5	3.9
C	0.8			1.0

2.5.5 Purge port option

	Dimensions [mm]			
	S15	S25	S40	S50
A	55 ±1.0		65 ±1.0	
B	55 ±1.0		65 ±1.0	

	Dimensions [inches]			
	S15	S25	S40	S50
A	2.2 ±0.04		2.5 ±0.04	
B	2.2 ±0.04		2.5 ±0.04	

3.1 Intended use

This mass flowmeter is designed for the direct measurement of mass flow rate, product density and product temperature. Indirectly, it also enables the measurement of parameters like total mass, concentration of dissolved substances and the volume flow. For use in hazardous areas, special codes and regulations are also applicable and these are specified in separate documentation.

Responsibility for the use of the measuring devices with regard to suitability, intended use and corrosion resistance of the used materials against the measured fluid lies solely with the operator.

This device is a Group 1, Class A device as specified within CISPR11. It is intended for use in industrial environment. There may be potential difficulties in ensuring electromagnetic compatibility in other environments, due to conducted as well as radiated disturbances.

The manufacturer is not liable for any damage resulting from improper use or use for other than the intended purpose.

3.2 Mounting restrictions

3.2.1 General installation principles

There are no special installation requirements but you should note the following points:

- Support the weight of the meter.
- The meter can be supported on the sensor body.
- On larger meter sizes and hygienic connections, it is strongly recommended that the meter is not supported solely by the process pipework.
- No straight runs are required.
- The use of reducers and other fittings at flanges, including flexible hoses, is allowed but you should take care to avoid cavitation.
- Avoid extreme pipe size reductions.
- Meters are not affected by crosstalk and can be mounted in series or in parallel.
- Avoid mounting the meter at the highest point in the pipeline where air / gas can collect.
- Avoid mounting the meter in long horizontal pipe runs where a build up of air / gas could cause zero instability.

Mounting positions

- ① The meter can be mounted at an angle but it is recommended that the flow is uphill.
- ② Avoid mounting the meter with the flow running downhill because it can cause siphoning. If the meter has to be mounted with the flow running downhill, install an orifice plate or control valve downstream of the meter to maintain backpressure.
- ③ Horizontal mounting with flow running left to right.
- ④ Avoid mounting meter with long vertical runs after the meter as it can cause cavitation. Where the installation includes a vertical run after the meter, install an orifice plate or control valve downstream to maintain backpressure.
- ⑤ The meter can be mounted vertically but it is recommended that the flow is uphill.
- ⑥ Avoid mounting the meter vertically with the flow running downhill. This can cause siphoning. If the meter has to be installed this way, install an orifice plate or control valve downstream to maintain backpressure.

Zero calibration

- ① Where the meter has been installed vertically, install shut-off valves either side of the meter to assist with zero calibration.
- ② If the process flow cannot be stopped, install a bypass section for zero calibration.

3.2.2 Maximum pipework forces

Avoid external forces that apply pressure (negative, positive or rotational) to the ends of the meter. If it is not possible to avoid such forces you **MUST** contact the manufacturer.

3.2.3 Sunshades

The meter **MUST** be protected from strong sunlight.

- ① Horizontal installation
- ② Vertical installation

The specifications contained herein are subject to change without notice and any user of said specifications should verify from the manufacture that the specifications are currently in effect. Otherwise, the manufacturer assumes no responsibility for the use of specifications which may have been changed and are no longer in effect.
